

Figure 1

A scatter plot showing the particle concentration (in #/mL) over time (in minutes) for particles with a diameter  $\geq 0.065 \mu\text{m}$ . The y-axis is logarithmic, ranging from 0.1 to 10,000 #/mL. The x-axis is linear, ranging from 12.00 to 4.00 minutes. The data points, represented by open circles, show a relatively stable concentration around 15 #/mL throughout the time period.

| Time (min) | Particle Concentration (#/mL) |
|------------|-------------------------------|
| 12.00      | 15                            |
| 11.50      | 12                            |
| 11.00      | 18                            |
| 10.50      | 10                            |
| 10.00      | 15                            |
| 9.50       | 12                            |
| 9.00       | 18                            |
| 8.50       | 10                            |
| 8.00       | 15                            |
| 7.50       | 12                            |
| 7.00       | 18                            |
| 6.50       | 10                            |
| 6.00       | 15                            |
| 5.50       | 12                            |
| 5.00       | 18                            |
| 4.50       | 10                            |
| 4.00       | 15                            |
| 3.50       | 12                            |
| 3.00       | 18                            |
| 2.50       | 10                            |
| 2.00       | 15                            |
| 1.50       | 12                            |
| 1.00       | 18                            |
| 0.50       | 10                            |
| 0.00       | 15                            |
| -0.50      | 12                            |
